

FW: URGENT: NOTICE OF CONTESTED ASSETS & REGULATORY RISK – LST/NTU CONTRACT (REF: 2025/S 000-067921)

From Andrew Hemsall <andrew.hemsall@lightsciencetech.com>

To harry.j.wright@protonmail.com

Date Thursday, February 19th, 2026 at 3:35 PM

Dear Mr Wright

We are in receipt of your email dated 16th February, received via Walbrook PR, relating to our contract for Nottingham Trent Universities, Smart Agricultural Research Centre.

To give you the background of this contract, NTU gave a very open brief to all participants to design a laboratory for the purposes of plant science research. There was no requirement to incorporate any NTU IP or protocols, nor are we aware of any.

Our design uses standard shipping containers with three main elements inside each as follows:

- Our patented SensorGrow sensors
- Our patented NuturGrow lights
- Our Tomtech control systems to operate the above with protocols designed prior to the year 2000.

Following our disclosure above, we can confirm that Light Science Technologies Ltd does not use any NTU IP, protocols or any other elements that you are referring to. If you still believe that you have grounds for a claim, then we would request that you clearly set out your position, providing relevant UK patent details.

Kind Regards

Andrew Hemsall

Chief Operating Officer- LST Holdings plc

Subject: URGENT: NOTICE OF CONTESTED ASSETS & REGULATORY RISK – LST/NTU CONTRACT (REF: 2025/S 000-067921)

To whom it may concern,

I am writing to formally notify Light Science Technologies Holdings PLC ("LST") of a primary ownership dispute regarding the Intellectual Property (IP) currently being utilised to fulfil the £460,000 contract for Nottingham Trent University's (NTU) Smart Agricultural Research Centre, announced by LST on 27 October 2025.

1. Proprietary Claim (The 681.3g Protocol)

I am the sole proprietor of the 681.3g Protocol which specifically governs the "Sensors + Tomatoes + Hydroponics + Electronics" nexus. This protocol constitutes a unique, multi-layered integration framework that facilitates the data-polling of nutrient-density sensors via custom firmware, mapped directly to tomato-specific environmental control loops.

Specifically, this IP covers:

- Embedded RT Architecture: A custom Real-Time Interrupt-driven Concurrency framework for ARM Cortex MCUs, utilising dedicated hardware interrupts and graceful exception handling to ensure sub-millisecond data integrity.
- Precision Analogue Signal Chain: Metrology-grade discrete PCB designs for sensor interfaces, including Voltage-Excited TIAs and Biased Inverting Amplifiers designed to eliminate ground reference integrity

issues.

- Low-Level Clock Synchronisation: Custom Phase Locked Loop (PLL) configurations and Signal Generation logic (MHz-level) used to stabilise sensor "Jitter" in high-interference agricultural environments.
- Memory-Mapped Control: Proprietary Linker Scripts and Flash memory enablement for secure, internal storage of ratiometric calibration data.

My evidential portfolio contains the original source code, history, and research logs that pre-date LST's October 2025 RNS announcement. Any forensic audit of the system currently being installed at the Brackenhurst-Southwell Sustainability Corridor will reveal these unique algorithmic signatures and logic structures as my exclusive property.

2. Absence of Assignment (Section 2.5 Violation)

Under NTU's own Intellectual Property Policy (Section 2.3/2.4/2.5), ownership of this research remains with the inventor unless a formal Section 2.5 Assignment of Rights is executed. I have not signed, nor been presented with, any such assignment. Consequently, NTU does not possess the legal title required to sub-license or sell this IP to LST.

3. Forensic Evidence of Conflict

I hold a cryptographic Genesis Block predating your contract award by three years. This dispute is currently the subject of active regulatory proceedings:

- **SAR-REF:** 2664145
- **SAR-FILING-DATE:** 2025-11-30
- **SAR-REFUSAL-DATE:** 2025-12-19
- **SAR-STATUTORY-BREACH-DATE:** 2025-12-30 (Statutory Default)
- **ICO-FILING-DATE:** 2026-01-18
- **OIAHE-CASE-ID:** OIA/1639159/26
- **OIAHE-FILING-DATE:** 2026-01-22
- **INTERIM-RELIEF-NOTIFICATION:** 2026-01-19
- **NON-SPOLIATION-NOTIFICATION:** 2026-01-19

I have identified forensic anomalies, including the Jitter Paradox (Ref: SIG-01.1), which prove metadata tampering in NTU's recent administrative disclosures. This suggests a post-facto attempt to manufacture title to assets I legally own.

4. Market Impact and Disclosure Risk

As an AIM-listed entity, LST's 15% share price surge following the 27 October announcement is predicated on the "World Class" nature of this system. If this system is built on contested or unlicensed IP, your current market disclosures may be considered inaccurate or misleading under the Market Abuse Regulation (MAR).

5. Proposed Resolution: Global Settlement and Title Regularisation

In light of the documented Statutory Defaults and Forensic Anomalies identified in the SIG-01.1 Ledger (Ref: OIA/1639159/26), and to preserve the viability of the LST-NTU commercial partnership, I am prepared to offer a

Global Settlement Agreement. This offer is contingent upon the regularisation of all proprietary assets and the resolution of all outstanding administrative grievances.

The Settlement Terms comprise:

- Asset Assignment (IP): A one-time assignment of the 681.3g Protocol and associated "Embedded Interface" firmware to LST/NTU to ensure "Clean Title" for the AIM-marketed project.
- Liquidation of Damages: A fixed-sum payment of £630,000 (Six Hundred and Thirty Thousand Pounds). This figure accounts for the 1,263 days of diverted R&D, the quantifiable Research Depreciation, and the profound personal and financial damages caused by the engineered Spatial Trap.
- Global Release and Non-Disclosure: Upon receipt of funds, I will execute a comprehensive Deed of Release, withdrawing all claims filed with the OIAHE and ICO, and entering a permanent confidentiality agreement regarding the Jitter Paradox and institutional administrative failures.

Failure to acknowledge this dispute and initiate settlement proceedings by 16:00 GMT on 19 February 2026 will result in the immediate execution of the following protocols:

- FCA Regulatory Filing: Notification to the Financial Conduct Authority regarding the "Contested Asset" status of the LST contract and potential breaches of the Market Abuse Regulation (MAR).
- Statutory Injunction: Filing for an emergency injunction to halt all physical installations at the Brackenhurst Perimeter to prevent further Spoliation of Evidence.
- Home Office Reclassification: Submission of the SMSI Feasibility Study to the Home Office, initiating the process for the "Strategic Reclassification" of the site for National Social Infrastructure.

Yours faithfully,

Harry Wright
