Dear Mr Wright

Your Reference: 2814367
Request for Personal Data – Subject Access Request

Thank you for your request dated 14 February 2026. I confirm receipt of your request. Please accept my apologies for the delay in acknowledging this request.

Please note the Universities response in acknowledgement to your request below:

1. Forensic Discrepancy: Unauthorised Author Signatures

Initial audit of the SAR disclosure [Ref: Jan 22 Package] has identified a significant procedural anomaly. Forensic metadata analysis identifies Anthony Jordan (IT/Estates Programme Lead) as the author of the primary Conduct Report and Jane Maddock (Senior Contracts Associate, FCILEx) as the creator of core disciplinary artifacts. This indicates that the record was generated by commercial/system-level administrators rather than academic conduct officers, suggesting a Synthetic Record Construction.

The University refutes any inference of Synthetic Record Construction. As previously explained to you, a Subject Access Request does not infer a right to original copies of documentation. It provides a right to copies of personal data contained within material held by the University. As such, the Information Governance Team review all documents returned and convert those documents into PDF in preparation for disclosure. This allows us to ensure documents disclosed can be suitably redacted to remove none-personal data as well as data of third parties. It also ensures disclosed documents cannot be edited. Therefore, the documentation you receive is not the 'original' documents and any audit logs will show editing dates of the time the Information Governance team have processed the documents. I can confirm Jane Maddock, Contracts Associate is currently working on a temporary basis within the Information Governance team and processed your SAR. Therefore, it is likely that she will appear as the 'author' or 'editor' of many of those documents when she has processed your request and converted material into PDFs. An individual being named as an author of a document does not mean that they created the document within its entirety. The likely scenario is that Anthony Jordan at some point created a template document which has been picked up and edited to become the Conduct report template. Anthony Jordan has not processed your personal data. The author of the conduct report is the named individual within that report.

2. Identification of Selective Filtering (The Communication Void)

Analysis reveals a statistically impossible "Total Communications Void." Despite Jordan and Maddock's roles as primary document creators, there is an absolute absence of their internal correspondence within the disclosure. Under the Data (Use and Access) Act 2026, this suggests a Pre-Discovery Filtering Event. The researcher requires the unredacted audit trail of the assembly process. This extends to "Courtney Morgan", "Hannah Lambert", "Chelsea Parker", and "Jo Taylor".

Please see response to question 1 above. There is no Pre-Discovery filtering event. You were provided with all information which was collated by the Information Governance Team in response to your SAR. The audit trail of assembly compiles of emails from the Data Protection Team to relevant teams, requesting copies of personal data, who in turn provide original copies of documentation. This is then compiled, reviewed and turned to PDF by the Information Governance team in preparation for disclosure for the reasons outlined above. There are no audit trails of that process other than copies of those exchanges, which can be provided where their contents relate to you. Original documents and associated metadata will not be provided.

3. Specific Technical Requisitions (Server-Side)

To resolve the "Jitter Paradox" (zero-variance timestamps) identified on 11/02/26 and currently under review by Information Governance, the following must be produced:

Full Header Metadata for all files in the SAR-HW series.

E-Learning Module Status Logs: Full transaction history for the current academic year.

Transmission Metadata: Full assembly logs for the Jan 22 zip package, including the originating IP and workstation ID of the compiler.

Physical Security Access Logs: Full logs of my cards swipes on NTU campuses.

The Database Audit Table for Student ID N0605150 in the Student Records system.

The log of who had "Full Access" or "Send As" permissions for your University email account.

Provide a comprehensive log of all 'Third-Party Disclosures' and 'Data Sharing Agreements' involving N0605150.

I specifically require the Microsoft 365 / Azure Unified Audit Log (UAL) and eDiscovery Search Logs for the period Oct 2025 - Feb 2026. This must include all 'SearchCreated', 'FileAccessed', and 'MailboxLogin' events performed by administrative accounts (including Anthony Jordan) targeting the N0605150 mailbox and OneDrive repository.

I have responded to your email request regarding the "Jitter Paradox" on 19 February 2026 and confirmed there is no suspicious activity. I will not provide full header metadata for all files within the SAR-HW series as the documents are collated and converted to PDF. Therefore, the original audit trail and metadata is lost. It would be disproportionate and unreasonable to review each individual original artifact and provide full audit trails. This is not a right inferred to you under any Data Protection Legislation; therefore I will not be responding to this point. I will also not provide the assembly logs for the Jan 22 Zip

package, the IP and workstation ID. This is not within the remit of a Personal Data Subject Access Request.

Please provide further explanation as to what you are requesting when you refer to 'E-Learning Module Status Logs'. If you are referring to your own learning history, as a current student this is accessible to you.

I will request a copy of your door access swipe logs.

I will investigate whether the University can provide audit logs of access to student records systems.

Please confirm who is referenced as 'your' email account in the point you raise here.

If you wish to provide clarifications on any of the points above, please contact me stating the reference number 2814367. Otherwise I will respond to the elements I am able to by 14 March 2026.

Please note that the University notes the complexity and volume of requests which you are submitting is increasing. In line with ICO guidance, we reserve the right to extend any deadlines of requests, where multiple requests are imputed concurrently.

Kind regards,
Lindsey
